ABSTRACT

This directory contains reported information, as of the beginning of the 1972-73 school year, on the racial/ethnic composition of pupils and full-time classroom teachers (assigned to one school) in approximately 8,000 school districts in the continental United States including Alaska and the District of Columbia. This information was reported to the Office for Civil Rights by school district superintendents and/or State education agencies. All school districts with 3,000 or more pupils in enrollment (1971-72) were surveyed. Smaller school districts were selected for inclusion in the survey in a statistically random manner based on district enrollment size in the preceding school year as determined by the USOE National Center for Educational Statistics. In addition, all districts eliminating racially or ethnically dual school systems under terms of voluntary plan agreements with the Department of Health, Education, and Welfare or under Federal court order were surveyed regardless of school district enrollment size. INTRODUCTION

The Office for Civil Rights (OCR) is responsible for administering Title VI of the 1964 Civil Rights Act as it applies to programs funded by the Department of Health, Education, and Welfare. Title VI prohibits discrimination based on race, color, or national origin in any program or activity that receives Federal financial assistance. In partial fulfillment of this responsibility periodic racial/ethnic surveys of public elementary and secondary schools are conducted as authorized in regulations implementing Title VI.

The most recent national survey was conducted in fall of 1972 and was based on a large sample or public elementary and secondary school districts and their schools. Minority racial/ethnic categories include American Indian, Oriental, Spanish Surnamed American as well as Negro. White non-minority and undesignated minority groups are included in the column headed "other". Opportunity Systems, Incorporated (Washington, D. C.) and Lambda Corporation (Arlington, Virginia), under contract with the Office for Civil Rights, conducted the fall 1972 survey.

The Office for Civil Rights appreciates the considerable time and effort expended by the many State and local officials who participated in the survey.

Survey Description and Source of Data

This directory contains reported information, as of the beginning of the 1972-73 school year, on the racial/ethnic composition of pupils and full-time classroom teachers (assigned to one school) in approximately 8,000 school districts in the continental United States including Alaska and the District of Columbia. This information was reported to the Office for Civil Rights by school district superintendents and/or State education agencies. These reports were required under the regulations implementing Title VI of the Civil Rights Act of 1964. Hawaii and the Territories were not required to participate in this survey.

All school districts with 3,000 or more pupils in enrollment (1971-72) were surveyed. Smaller school districts were selected for inclusion in the survey in a statistically random manner based on district enrollment size in the preceding school year (1971-1972) as determined by the United States Office of Education, National Center for Educational Statistics.

The sampling plan used was as follows:

District Enrollment	Sampling Rate	Projected Total in Each Size Category
3,000 or larger	100%	actual data
1,500 - 2,999	75%	4/3 times actual data
600 - 1,499	50%	2 times actual data
300 - 599	25%	4 times actual data
less than 300	0%	none

In addition to the above sampled districts, all districts eliminating racially or ethnically dual school systems under terms of voluntary plan agreements with the Department of Health, Education, and Welfare or under Federal court order were surveyed regardless of school district enrollment size. The list of such school districts was generated from the OCR fall 1971 school survey and 1,456 districts were so identified. The actual implementation of the survey required a merge of the two lists, i.e., a merge of the Office of Education school district list and the 1,456 special situation districts provided from the 1971 OCR survey. The draw of the survey for 1972 was done in a two-step manner. First a district was found on the OE list and it was decided—in terms of its enrollment—if it should be included in the 1972 survey and with what statistical weight. If this random draw didn't call for its inclusion, then the "side" list of 1,456 special districts was examined to determine if the district should be included in the survey after all. If the district was found on the side list, it was included in the survey, but was assigned statistical weight of zero which meant that it didn't contribute to universe projections, but its data was available for other purposes. Approximately 300 such districts were identified and surveyed.

Among consequences of this approach was the fact that certain school districts with fewer than 300 enrolled pupils were included in the survey processing. Approximately 70 school districts were in this category. It should also be noted that certain State variations were encountered on the OE lists and necessitated special provisions; the most notable was California which reports Average Daily Attendance (ADA) rather than Average Daily Membership (ADM).

Survey Universe

There were 8,104 district forms sent out in the primary mailing. The final file contained 8,056 districts; the difference due to several factors, primarily consolidation of districts. This represents approximately 46% of the Nation's public school districts but 72.5% of the schools and 91.8% of the enrolled pupils.

In the eight tables included in the front of this directory, we have only compiled the data from the districts that participated with non-zero statistical weight in the survey. Thus, "total district," etc., in these tables refers to total statistically contributing districts without the zero weight entries. This was done to make more meaningful the actual versus universe projection comparison. Tables I and II show actual and projected survey enrollment data, by State. Table III shows the various racial/ethnic State enrollment totals expressed as a percentage of total State enrollment. Table IV shows the various racial/ethnic State enrollment totals expressed as a percentage of the National total enrollment of particular racial/ethnic groups. Tables V through VIII display similar data for faculty compositions.

Editing and Processing of Data

Numerically additive data items were required to pass a rigid computer check before certification of their information in the computer file. All checks of submitted information that could be performed were conducted by computer, including consistency checks and numerical cross-checks. A frequent discrepancy occurred when the sums of individual school data items did not equal the district totals reported on the district summary form. In order to expedite the editing process--as well as attempt to control costs--only those numerial errors representing more than 2% discrepancy from the corresponding total were flagged by the computer for editing attention. The discrepancies were brought to the attention of the school district or State agency supplying the original data and were subsequently resolved by the originating organization. The other remaining differences were "forced" to agree by the computer and entered in the file as "correct".

Some schools are listed that offer specialized training such as remedial reading or vocational crafts. These schools are included since they contain full-time teachers but the students are accounted for elsewhere in the district in their regular academic school assignments.

Arrangement of the Directory

The directory is arranged in alphabetical order of school district within State. Within each district, the schools are arranged in order of highest grade offered. In addition, schools offering only special education and/or ungraded are at the end. Kindergarten is considered lower than first grade and schools with the same highest grade offered are arranged in order of

increasing numerical value of lowest grade offered. Within each like grade span, the schools are arranged alphabetically by school name. The school name is truncated to twenty-four characters. Consideration of the grades offered may prove helpful in identifying similarly named schools within a district. Abbreviations used in the grades area of the report are P = pre-kindergarten, K = kindergarten, U = ungraded, and S = special education.

The schools within New York City are arranged in the same manner as other districts, with an additional arrangement factor of borough. In other words, the school district of New York City is broken into five subcategories, one for each borough, and then the schools are arranged as described above within each borough.

The primary body of the directory contains those school districts that had non-zero statistical weight and are included in the summary reports of Table I - VIII. The approximately 300 districts with zero weight included in the survey are collected at the end of the directory and the same general arrangement rules are followed. There are a few large districts in the zero weight list at the end that received zero weight because of a consolidation that occurred after the time of collection of the source of the sample selection list, rather than their enrolling fewer than 3,000 pupils.
